Technology

SURF SURFACTANT WITH ACTIVATION TECHNOLOGY

Speeds weed kill treatments

Efficient plant absorption of herbicides

Use with AquaVet Shoreline Weeds
and AquaVet Submerged Weeds

MIX 8 OUNCES TO 25 GALLONS OF
ALGAECIDE OR HERBICIDE OR MIX
ONE TABLESPOON TO ONE GALLON

MADE IN THE USA

NET CONTENTS **8 OUNCES** • 236 mL

SURF SURFACTANT

WITH ACTIVATION TECHNOLOGY

AquaVet™ SURF is a non-ionic water-soluble product that enhances the effectiveness of aquatic & agricultural chemicals.

The addition of AquaVet SURF improves the absorption of post-emergence herbicides. With SURF, plants are covered better with spray and the herbicide also reaches depressions in the leaf's surface and adheres to them.

How does it work? AquaVet SURF reduces the surface tension of the spray and increases the adherence of herbicides to the leaf surface, preventing the product from dripping off. When SURF is added to a spray mixture, foliate wettability is greatly improved on the surface of either "waxy" or "hairy" leaf surfaces or buds.

DIRECTIONS: MIX 8 OUNCES TO 25 GALLONS OF ALGAECIDE OR HERBICIDE, OR MIX ONE TABLESPOON TO ONE GALLON OF ALGAECIDE OR HERBICIDE
