DO-IT-YOURSELF
VACCINATION GUIDE

Each single-dose bag of **Canine Spectra** or **Feline Focus** vaccine contains a syringe & two vials — one with liquid contents & one with freeze-dried contents. Use immediately after mixing as shown below.

Step One. Insert needle directly through the cap of liquid vial then withdraw the contents into syringe.

Step Two. Inject liquid contents of the syringe into the vial of dried material. Mix gently until dissolved.

Step Three. Withdraw entire vaccine mixture (1 mL) into syringe. Remove air by gently pushing plunger until vaccine just begins to flow from the needle.

Step Four. The recommended vaccination site is the loose skin at back of neck and shoulder. Gently grasp and elevate a fold of loose skin. Insert needle into soft tissue directly under skin and inject entire contents of syringe.

Questions? Call our helpline **1-800-821-5570** 8 am–5 pm CST
